ART in the Future: Link between Practice and IVF centers

3rd Edition

March 05-06, 2020

Cultural Center LAC - Lugano

10 Credits: SGGG / SSGO

Scientific Committee: MD Marina Bellavia, MD Michael Jemec

Infertility is a condition that concerns not only reproductive specialists but all gynecologists.

In recent years, reproductive medicine has undergone profound changes in the application and integration of the latest discoveries in the field of genetics. The purpose of our congress is to know what innovations can be applied immediately in our clinical practice, and what the near future holds.

Participants should have answers to questions such as: are there new tests to safeguard the child's health? Are there new tests to improve spontaneous or PMA pregnancy rates? Are there new therapies or diagnostic tools in the management of infertility? All these points will be evaluated with renowned speakers for the best clinical practice.

Sponsors

Timetable and Scientific Program

Thursday March 5TH
